Write an ALP that does the following

(1) Displays "Enter name of file in next line"
(2) Cursor moved to next line where user enters the name of the file e.g. *mp123.txt*

   Note: user will enter a file that has name of 5 characters and extension of three characters.

(3) Read the first 20 characters in the file mp123.txt (You can assume all 20 characters will be in a single line of the file). The file will definitely have 20 characters
(4) Display the characters read in a column format with black background and a bright green foreground. You have to use text mode for display with no blinking.
   For e.g. if the characters in a file where **'abcdefghijklmnopqrst'**
   IT should be displayed as
   a
   b
   c
   d
   e
   f
   g
   h
   i
   j
   k
   l
   m
   n
   o
   p
   q
   r
   s
   t
(5) Screen should return to previous display mode when '*' is pressed.
